IN ACCORDANCE WITH NCC VOLUME 2 (SECTION P3.10.1), THIS PRODUCT SATISFIES PERFORMANCE REQUIREMENT P2.1.1 FOR CONSTRUCTION IN A HIGH WIND AREA.

SCREW FIXINGS TABLE

Timber or steel 0.75 to 1.0mm thick

1.2 to 4mm steel

M6.5-12x55 roof

Product Name

METROLL CORODEK ROOF CLADDING

Product Description

Metroll Corodek - At 0.42 BMT & 0.48BMT is manufactured from G550 colour coated steel or zinc-aluminum alloy coated (AZ150) steel. At 0.60 BMT Corodek is manufactured from G300 colour coated steel or zinc-aluminum alloy coated (AZ150) steel. In some locations galvanised (Z450) may also be available.

Manufacturer's Name

Metroll Queensland Ptv. Ltd. t/as Metroll Darwin 81 Marjorie Street Pinelands NT 0828

Design Criteria

ABN 17 010 035 266

1. These tables shall be used in conjunction with wind loads calculated using AS/NZS1170.2:2011 (Incorporating Amendments No's 1, 2, 3, 4 and 5).

Limitations

- 1. This Deemed to Comply (DTC) sheet is for roof applications
- 2. The values listed in this table are only valid for the Low-High-Low pressure sequence within Part 3.5.1.0 of the NCC 2019 Building Code of Australia - Volume Two.
- 3. The maximum permissible free edge overhang is: 100mm from screw line.
- 4. The maximum permissible stiffened edge overhang is: 300mm from screw line.
- 5. Sheeting span can be limited by maximum batten spacing.
- 6. It is essential that the relevant deemed to comply information for the batten product is used in conjunction with this sheet.

NOTES TO TABLES

1. The table values are only valid for use when the supporting steel members are high tensile steel, G450 with thickness greater than or equal to 0.75mm or F17 Hardwood.

NARMITA APPOLICE APPORT

- 2. Roof sheeting shall be crest fixed to supports with Class 4 self drilling screws (complying with the screw fixing table) at every second rib in accordance with the manufacturer's recommendations. Length to suit insulation/sarking and 30mm embedment into timber. Cyclone washers, where specified, shall be "Rooflok".
- Side lap fasteners are required on all spans greater than 900mm and shall consist of No.8-18 x 12mm screws at midspan.
- Italic & Bold denotes spans that exceed foot traffic limitations.
- Maximum spans to suit foot traffic are 900mm for 0.42BMT, 1300mm for 0.48BMT and 1600mm for 0.60BMT provided that the load is spread across a minimum of two ribs.
- Span types in the tables refer to the following support and geometry configurations

o. Opan types in the tables re	iter to the following support and geomet	ry cornigurations.
		A A A
0.8L L 0.8L		_ L _ L _
Internal span	Equal span	Double span

Where: \triangle denotes a support location. L=span to be used in conjunction with the table.

- This table has been prepared by LCJ Engineers Pty Ltd. It is based on the Low-High-Low testing completed by the Cyclone Testing Station (CTS), School of Engineering, James Cook University. The results of the testing are outlined in the testing report TS716, TS738, TS747c, TS791b and TS936 produced by the CTS. Ultimate cyclic wind load strength tests were NATA accredited
- 2. Load testing carried out by James Cook University, Cyclone Testing Station, report No. TS716, TS738, TS747c, TS791b and TS936, Product tested to AS 4040.1:1992, AS 4040.3:2018 and Low-High-Low as per Part 3.5.1.0 of the NCC 2019 Building Code of Australia - Volume Two. Tests carried out: cyclonic airbox wind test for strength. Static testing for serviceability.
