Product Name

Steeline SteelRib 675 Sheeting for Roofs

Product Description

SteelRib 675 Screw Fixed Roof Sheeting

Manufacturer's Details

GENERAL ROOFING PRODUCTS PTY LTD  
24 Pruen Road, Berrimah, NT, 0828

Design Criteria

- Wind speeds, pressures shall be determined in accordance with AS/NZS1170.2-2011 Amndt 1 - 5, Structural Design Actions - Wind Actions
- $V_{des\theta}$  Design Wind Speed at reference height (m/s):
- Internal Pressure Coefficient  $C_{pi} = +0.7$
- $C_{pe} = 0.9$  for h/d ratios  $\leq 0.5$
- $P_e = q_u \times (C_{pe} \times K_L \times K_{c,e} + C_{pi} \times K_{c,i})$
- $K_{c,e} = K_{c,i} = 0.9$
- "a" = Minimum of 0.2\*d or 0.2\*b or h
- Site wind speed calculated in accordance with AS/NZS1170.2-2011 Amndt 1 - 5, Structural Design Actions - Wind Actio

Limitations

- Pitch limitation is subject to drainage requirements and shall be checked separately.
- For roof pitch  $< 10^\circ$  - note RC1 local zone in roof corners.
- Limited to h/d not greater than 0.5 in tabled spacings.
- $M_t = M_s = M_d = 1.0$
- Maximum overhang - 200mm
- Minimum purlin steel thickness for fixing - 1.5 mm BMT G450
- For h/d>0.5 where  $C_{pe} > 0.9$  refer to site specific engineer certification with adjusted  $P_e$  calculation.
- Installation assumes conventional edge flashing is installed over unlapped edges of sheeting.
- For Buildings not greater than 25m in height
- Always walk over supports if possible, generally keep your weight distributed evenly over the soles of your shoes in the pans.
- Maintain a minimum of 3 screw threads protruding on the far side for steel support and minimum 30 mm embedment depth into timber support.
